

STORAGE TECHNOLOGY FOR THE TIMBER TRADE

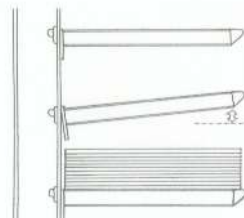

OHRA 
RACKING SOLUTIONS

CANTILEVER RACKING

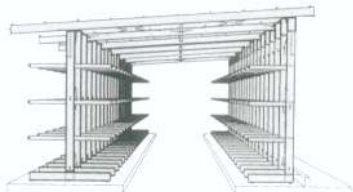

The storage of timber is a particularly difficult and demanding task. For more than 25 years OHRA characterises the technical development of economic space-saving racking and storage solutions. OHRA invented and perfected the flexible arm, today a standard feature in the timber trade. The cantilever arm evades on impact, saving potential damage to your rack, forklift

an staff. The end of the arm is rounded as a further safety feature. An adjustment screw is provided to allow adjustment to the horizontal plane of the supported load. Easily adjustable arm heights by the use of an OHRA quick release patented securing device. All support beams are manufactured from high quality hot-rolled steel.

CANTILEVER RACKING

OHRA solutions lead from a roof covered rack up to an enclosed warehouse including lighting systems, sprinkler systems, overhead,

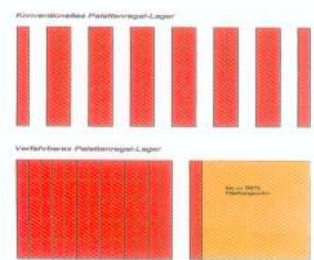

cranes and foundation management. We assist with the optimum layout to ensure maximum material flow for maximum

productivity. We strive to find the solution the customer requires.

FUTURE STORAGE SYSTEMS

Future storage systems strive to store many product lines in available space effectively and safely in a single handling movement to pick and to

dispatch the customer with the minimum of effort. The new projects and challenges for the future warehouse solutions under development

ensure that the OHRA products are characterised as tomorrows solutions.

OHRA

OHRA

RACKING SOLUTIONS

The beginning of the inhouse production of racking systems states a story of success for OHRA which continues today. We owe this fact to our customers and their continued requirement for economic storage solutions. The resulting innovations and our competent sales consultants throughout Europe provide OHRA with major competitive advantages over all of our competitors. Modern Robotic manufacturing techniques ensure quality and standardisation for all solutions. With numerous branches and

partner companies, OHRA is one of the most important European manufacturers of storage equipment today - from storage labelling to racking systems up to the general supplier of warehouses and complex, fully-automated logistic high-racking projects.
